Key Information Document
Delta One CFD on a Commodity

Key Information Document – Delta One CFD on a Commodity

Purpose
This document provides you with key information about this investment product. This is not marketing material. This information is required by law to help you understand the nature, risks, costs, potential gains and losses of this product and to help you compare it with other products.

CFDs are provided by **Monecor (London) Ltd**, a company registered in England and Wales, number 00851820. ETX Capital is a trading name of Monecor (London) Limited which is authorized and regulated by the Financial Conduct Authority in the United Kingdom, register number 124721.

Call 0800 138 4582 or go to www.etxcapital.com for more information. This document was created/last updated on May 30th, 2018. **You are about to purchase a product that is not simple and may be difficult to understand.**

What is this product?

A Delta One product allows the investor to gain exposure to the reference market in a more capital efficient manner. A Delta One product allows our clients the ability to gain leveraged exposure to the reference market while containing no pricing optionality. As such, movement of the Delta One markets will always be 1:1 with the reference market upon which it is based.

A Delta One contract for difference (“CFD”) is a leveraged contract opened with ETX Capital. It allows an investor to speculate on rising or falling prices of a reference CFD commodity. Delta One CFD trading gives an investor the choice to buy (go “long”) the CFD Commodity to benefit from the rising commodity prices; or sell (go “short”) the CFD to benefit from falling Commodity prices. The price of the Delta One CFD is derived from the price of the reference commodity. The ETX Capital Delta One contracts will be calculated using the current price of the reference contract and will offset that price with a “strike” price. For example, buying one Delta One CFD of Gold with a reference commodity price of 1301.0, might have a Strike price of 780.4 and as a result will make the Delta One price of Gold 520.6. If the price of the Commodity were to move 520 points the Delta One CFD would settle. The Delta One would not show a negative price.

For instance, if an investor is long on Delta One Gold CFD and the price of gold rises, the value of the reference CFD will increase. ETX Capital will pay the difference between the closing value of the contract and the opening value of the contract. Conversely, if an investor is long a Delta One Gold CFD and the value of the reference gold market falls, the value of the Delta One CFD will decrease. The client will pay ETX Capital the difference between the closing value of the contract and the opening value of the contract. A Delta One CFD referencing the reference future price works in the same way, except that such contracts have a pre-defined expiry date. The leverage embedded within all Delta One CFDs has the effect of magnifying both profits and losses.

Objectives
The objective of the Delta One CFD is to allow an investor to gain leveraged exposure to the movement in the value of the reference commodity (whether up or down), without actually needing to buy or sell the physical commodity. The exposure is leveraged since the Delta One CFD only requires a small proportion of the notional value of the contract to be put down as initial margin, which is one of the key features of trading CFDs.

Delta One Products create more accessible trading options by allowing the investor the ability to trade the equivalent market price of a reference market. The exposure is limited since the Delta One CFD only requires a proportion of the notional value of the contract to be put down as initial margin, which is one of the key features of trading Delta One products.

The Delta One Cash CFD does not have a pre-defined maturity date and is therefore open-ended. As a result, there is no recommended holding period for either and it is down to the discretion of each individual investor to determine the most appropriate holding period based on their own individual trading strategy and objectives.

Failure to deposit additional funds in the case of negative price movement may result in the Delta One CFD being auto-closed. This will occur when losses exceed the initial margin amount. In the case of Delta One Future CFDs, investors will be given the option to roll their existing contract into the next period – i.e., from a January expiry into a February expiry. Rolling is at the discretion of the investor but failure to do so will result in the CFD being auto-closed at the expiry date. ETX Capital also retains the ability to unilaterally terminate any Delta One CFD contract where it deems that the terms of the contract have been breached.

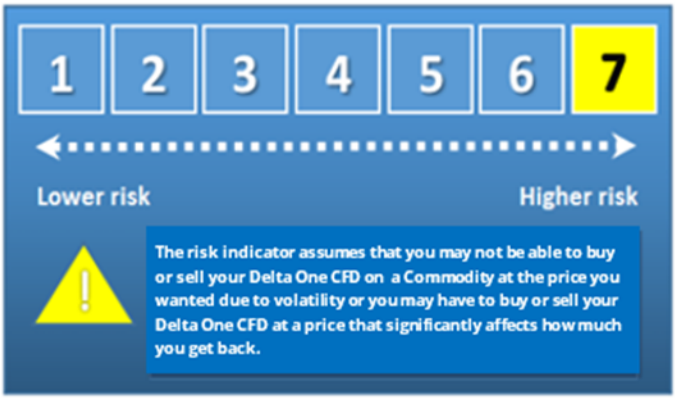
For more information and examples please see the ETX website.

Intended Retail Investor
Delta One CFDs are intended for investors who have knowledge of, or are experienced with, leveraged products. They will therefore understand how the prices of CFDs are derived, the key concepts of margin and leverage and the fact that losses may exceed deposits. They will also understand the risk/reward profile of the product compared to traditional share dealing. Investors

will have appropriate financial means and the ability to bear losses in excess of the initial amount invested.

What are the risks and what could I get in return?

Risk Indicator



The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you. We have classified this product as 7 out of 7, which is the highest risk class. This rates the potential losses from future performance of the product at a very high level.

Delta One CFDs are leveraged products that, due to reference market movement, can generate losses rapidly. Losses can exceed the amount invested and you may be required to deposit additional funds. There is no capital protection against market risk, credit risk or liquidity risk.

Be aware of currency risk. It is possible to buy or sell Delta One CFDs on a commodity in a currency which is different to the base currency of your account. The final return you may get depends on the exchange rate between the two currencies. This risk is not considered in the indicator shown above.

In some circumstances you may be required to make further payments to pay for losses. **The total loss you may incur may significantly exceed the amount invested.** Market conditions may mean that your Delta One CFD trade on a commodity is closed at a less favourable price, which could significantly impact how much you get back. We may close your open Delta One CFD contract if you do not maintain the minimum margin that is required, if you are in debt to the company, or if you contravene market regulations. This process may be automated.

This product does not include any protection from future market performance, so you could lose some or all of your investment. If we are not able to pay you what is owed, you could lose your entire investment. However, you may benefit from a consumer protection scheme (see the section "what happens if we are unable to pay you"). The indicator shown above does not consider this protection.

Performance scenarios

The scenarios shown illustrate how your investment could perform. The scenarios presented are an estimate of future performance based on evidence from the past on how the value of this investment varies, and are not an exact indicator. What you get will vary depending on how the market performs and how long you hold the CFD.

The following assumptions have been used to create the scenarios in Table 1:

For Example, if an investor buys 1 Delta One CFD of Gold with an initial margin of 5% and a reference commodity price of 1301.0 and a Strike price of 780.4, the Delta One price will show 520.6. The initial investment will be $260 (520.6 x 1) x 5%. The notional value of the contract of $5206 (10 x 520.60) x 1. For each 1 point change in price of the reference commodity the value of the Delta One CFD also changes by 1 point ($1). If the investor is long and the market increases in value, a $1 profit will be made for every 1 point increase in that market. If the market decreases in value, a $1 loss will be incurred for each point the market decreases in value.

Commodity CFD (held intraday)		
Reference Index opening price	P	1301.0
Strike Price	S	780.4
Delta One Index opening price:	D1P= P - S	520.6
Trade size (per CFD):	TS	$1
Margin %:	M	5%
Margin Requirement:	*MR* = D1P x TS x M	$260
Notional value of the trade:	*TN* = D1P x TS	$5206

Table 1

LONG Performance Scenario	Reference Price	Initial Delta Price	Price Change	Reference Price Points movement	Percent Movement of Reference Price	Delta Price after move	Stake	Profit/Loss
Favourable	1301	520.6	1.50%	78.09	0.60%	528.409	1	78.09
Moderate	1301	520.6	0.50%	26.03	0.20%	523.203	1	26.03

Unfavourable	1301	520.6	-1.50%	-78.09	-0.60%	512.791	1	-78.09
Stress	1301	520.6	-5%	-260.3	-2.00%	494.570	1	-260.3
SHORT Performance Scenario	Reference Price	Initial Delta Price	Price Change	Reference Price Points movement	Percent Movement of Reference Price	Delta Price after move	Stake	Profit/Loss
Favourable	1301	520.6	-1.50%	-78.09	-0.60%	512.791	1	78.09
Moderate	1301	520.6	-0.50%	-26.03	-0.20%	517.997	1	26.03
Unfavourable	1301	520.6	1.50%	78.09	0.60%	528.409	1	-78.09
Stress	1301	520.6	5%	260.3	2.00%	546.630	1	-260.3

The figures shown include all the costs of the product itself. If you have been sold this product by someone else, or have a third party advising you about this product, these figures do not include any cost that you pay to them. The figures do not take into account your personal tax situation, which may also affect how much you get back. For more information and examples please see the ETX website.

What happens if ETX Capital is unable to pay out?

If ETX Capital is unable to meet its financial obligations to you, you may lose the value of your investment. However ETX Capital segregates all retail client funds from its own money in accordance with the UK FCA's Client Asset rules. ETX Capital also participates in the UK's Financial Services Compensation Scheme (FSCS) which covers eligible investments up to £50,000 per person, per firm. See www.fscs.org.uk.

What are the costs?

Trading a CFD on a commodity incurs the following costs:

This table shows the different types of cost categories and their meaning		
One-off entry and exit costs	Spread	ETX only charges a market spread.
	Currency conversion	Any cash, realized profit and losses, adjustments, fees and charges that are denominated in a currency other than the base currency of your account, will be converted to the base currency of your account and a currency conversion fee will be charged to your account.
	Commission	You will be charged a commission on each trade.
Ongoing costs	Daily holding cost	A fee is charged to your account for every night that your position is held. This means the longer you hold a position, the more it costs.
Other costs	Rollover costs	We charge you to roll over a futures contract into the next month or quarter, equal to half the applicable spread to open and close a trade.
Incidental costs	Distributor fee	We may from time to time where permitted by applicable law share a proportion of our spread, commissions and other account fees with other persons including a distributor that may have introduced you.

How long should I hold it and can I take money out early?

Delta One CFDs are intended for short term trading, in some cases intraday and are generally not suitable for longer term investment. There is no recommended holding period, no cancellation period and therefore no cancellation fees. You can open and close a CFD on a commodity at any time during market hours.

How can I complain?

If you wish to make a complaint, you should contact our Client Management Team on 0800 138 4582, by emailing customer.service@etxcapital.com or in writing to One Broadgate, London EC2M 2QS. If you do not feel that your complaint has been resolved satisfactorily, you may refer your complaint to the Financial Ombudsman Service (FOS). See www.financial-ombudsman.org.uk for further information. If your complaint is about an advisory or discretionary manager acting on your account, please contact the firm providing the service.

Other relevant information

If there is a time lag between the time you place your order and the moment it is executed, your order may not be executed at the price you expected. Ensure your internet signal strength is sufficient before trading.

The Terms and Policies section of our website contains important information regarding your account. You should ensure that you are familiar with all the terms and policies that apply to your account.
